

CONTINUOUS DRUM WASHER

CONTINUOUS DRUM WASHER MKP -500/1000

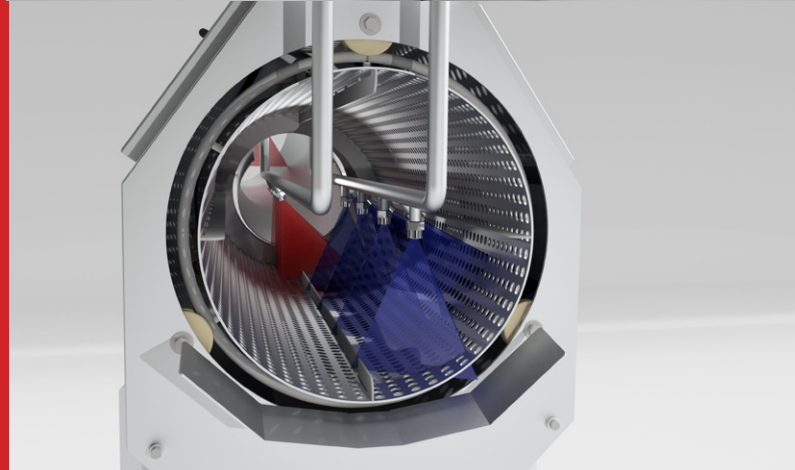

Drum, frame, water-buffer tank and all parts manufactured in stainless steel to ensure good pre-cleaning/washing of products before further processing.

Spiral drum with flights, secures a steady flow of product and also to adjust the retention time of the product in the drum

Similarly, the speed of the drum (RPM), combined with the slope of the drum, can also be used to control retention time. All dryers are set on a slight decline so gravity can assist in moving material through the unit
